

Ageing Digital Age

in the

The project “Ageing in the Digital Age” is aimed to tackle the gap between ageing population and digital literacy and address the high necessity for digital key competences of seniors, and make digital competences more accessible to them, as well as to strengthen and empower professionals, carers and volunteers working with senior citizens, so-called “front-liners” who are in direct and frequent contact with senior citizens to show and to explain which initiatives and programmes exist for older people to learn how to use online tools that improve their health and life quality.

Our website and e-platform

Having in mind the abovementioned assumptions, we searched for, identified and then selected appropriate and effective materials and best practice solutions during the project duration.

As a result, we have gathered a number of projects from each partner-country as well as outstanding projects from several other countries that qualify as best practice examples.

To see what we have collected, check out **our project website and e-platform**: <http://digitalageing.eu>. It gives access, with explanations in all languages of the partnership, to a database, searchable after various parameters e.g.:

- type of best practice: *project, initiative, programme, product, training / learning materials, network, website / app*
- target group: *senior citizens, professionals working with senior citizens, teachers & trainers, volunteers and caregivers*
- thematic area: *internet, general ICT aspects, health, access to services, leisure / socio / cultural*
- language.

This database describes and gives access to initiatives, programmes, methods and materials concerning the promotion of digital skills for people living in the 3rd age, who need to access public services online, to adapt to the digital-oriented world and to feel confident using online tools that help improve their health and life quality.

Ageing in the Digital Age

What's more?

During the project duration, we have changed the interactive forum into a **blog**: <http://digitalageing.eu>.

There you can find posts about interesting initiatives and activities aimed at seniors, solutions using information and communication technologies for seniors, as well as articles on digital exclusion of the elderly and many others.

What's else?

As part of the partnership, we are working on the **catalogue "Ageing in the Digital Age – Best Practice Support for Digital Competences of Seniors"**.

It is going to give an overview about the current situation of the specific project environment in the partners' countries. It will be enriched with the outcomes of the transnational meetings where seniors' education organisations, professionals, carers and volunteers working with senior citizens will discuss the issue with the representatives of our strategic partnership.

Dissemination

Are you interested in getting more information about the course? Please, do not hesitate to contact us. All contact detail you will find on our project website.
